

EDIT FLOW APPLICATIONS Bulk Products

EDIT FLOW

A range of industrial Micro wave measurement devices!

Flow No Flow
Flow detection

Standard version

Atex version

Dynamic Flow
Flow Measurement

OEM version

Standard version

High pressure version

Atex version

+ than 15 000 sensors working worldwide for 20 years

Almost all types of dust, powder or granules flows can be measured or detected in a closed conduit.

From some KG to several T/h

coal / lignite coke

ash

wood chips

stone powder

perlite

sand

cement

EDIT FLOW

A range of industrial Micro waves measurement devices!

Adapted to rugged process

(dust, water, T° fluctuation)

Adpated for process with fluctuations of T°, pressure, particle size

Adpated for various solids,

dust, granular, chips

Improve quality

Reduce P° costs

Increase rentability

EDIT FLOW

A range of industrial Micro wave measurement devices!

Solid Flow measurement or detection

To display the value for the operators

To log the data on the plant supervision system

To regulate the process through a PLC

Optimize the performance

Dynamic Flow

Solid Measurement: Control volume conveyed

Oversee the production

Dynamic Flow

Solid Measurement: Free fall applications

Monitor the quantity set

Dynamic Flow

Solid Measurement: Feeder

Regulate the process

Dynamic Flow

Solid Measurement: Pneumatically applications

Improve the quality of the finishing product

Solid Measurement: Mixer

1- Building material industries

1- Building material industries

Measure or detect in line the Flow of:

Sand

Cement

Lime

Coal

Wood

Limestone

Flour

Pellets

Powder

Chips

1- Building material industries

Free fall applications

Square pipe applications

Dynamic Flow

1- Building material industries

Free fall applications

Rond pipe applications

Dirty environment

1- Building material industries

Flow measurement
small pipe

1- Building material industries

Dynamic Flow
for cement
measurement

1- Building material industries

Dynamic Flow
for wood
powder

1- Building material industries

Dynamic Flow
for lime

1- Building material industries

Dynamic Flow
for lime

2- Chemical & pharmaceutical industries

2- Chemical & pharmaceutical industries

Every kind of Powder

2- Chemical & pharmaceutical industries

Dynamic Flow

2- Chemical & pharmaceutical industries

3- Foundry (steel and aluminium)

3- Foundry industries

Bulk measurement and detection of:

Coal

Steel Foundry

Aluminium Foundry

To measure or control the Coal Flow supplying the furnace

3- Foundry industries

1 Dynamic Flow per pipe.

In average 10 pipe per mill

3- Foundry industries

Big pipe = from 2 to 4 Dynamic Flow per pipe

3- Foundry industries

Steel plant

In average 22 Flow
no Flow and 2
Dynamic Flow per
furnace.

3- Foundry industries

Aluminium

In average one plant use 200 Flow no Flow sensors

4- Waste incinerator

4- Waste incinerator

Activated carbon or lignite coke

Waste incinerator

4- Waste incinerator

Dynamic Flow

4- Waste incinerator

Very low flow
< to 10 kg/h

4- Waste incinerator

Specific Dumper for low flow bulk measurement EDIT Patent.

4- Waste incinerator
